

Exam 70-413

Designing and Implementing a Server Infrastructure

Skills measured

This exam measures your ability to accomplish the technical tasks listed below. The percentages indicate the relative weight of each major topic area on the exam. The higher the percentage, the more questions you are likely to see on that content area on the exam.

Starting in April 2014, the questions on this exam will include [content covering Windows Server 2012 R2](#).

Please note that the questions may test on, but will not be limited to, the topics described in the bulleted text.

Plan and deploy a server infrastructure (20–25%)

Design and implement network infrastructure services (20–25%)

Design and implement network access services (15–20%)

Design and implement an Active Directory infrastructure (logical) (20–25%)

Design and implement an Active Directory infrastructure (physical) (20–25%)
